THE BTC CYCLE TOP CHECKLIST

The 8 indicators serious investors watch — with trigger thresholds and plain-English commentary.

By Torin Christianson · LiftOffr.com

How to Use This Checklist

When **5 or more** of these 8 indicators flash "TOP ZONE" simultaneously, the cycle is statistically near peak. No single indicator is reliable on its own — **confluence is the signal**.

Print this. Every Sunday, check each indicator. Score how many are in the trigger zone. Use the table on the last page.

1 CBBI (Colin Talks Crypto Bull-Bear Index)

WHAT IT IS: Composite score of 11 on-chain + market indicators, scaled 0–100.

TRIGGER ZONE: **85+** = top zone. **95+** = historical cycle top.

PLAIN ENGLISH: The single most reliable cycle gauge. When CBBI hits 95+, every previous cycle has topped within weeks.

2 Pi Cycle Top Indicator

WHAT IT IS: Crossover of the 111-day MA and 2× the 350-day MA.

TRIGGER ZONE: Cross within 3% = warning. Full cross = signal fired.

PLAIN ENGLISH: Has called the top within 3 days on every previous cycle (2013, 2017, 2021). Binary — it either fires or it doesn't.

3 MVRV Z-Score

WHAT IT IS: Distance between BTC market cap and "realized" cap, normalized.

TRIGGER ZONE: **5+** = top zone. **7+** = extreme.

PLAIN ENGLISH: Measures how overvalued BTC is vs. what holders actually paid. Above 7, every previous cycle has topped within 30 days.

4 Market Cipher B (Weekly)

WHAT IT IS: Custom oscillator combining money-flow, RSI, and divergence detection.

TRIGGER ZONE: Weekly bearish divergence with VWAP rejection.

PLAIN ENGLISH: When weekly Cipher B prints a red dot at the top of its range with bearish divergence, it's exit territory. Rare and high-conviction.

SOURCE: TradingView (paid indicator).

5 BTC Rainbow Chart

WHAT IT IS: Logarithmic regression bands colored from blue (cheap) to red (overvalued).

TRIGGER ZONE: **Red zone** ("Maximum Bubble Territory") = sell signal.

PLAIN ENGLISH: A rough but reliable visual heuristic. If price enters the top red band, take profits.

SOURCE: blockchaincenter.net/bitcoin-rainbow-chart/

6 2-Year Moving Average Multiplier

WHAT IT IS: BTC price vs. 2-year MA $\times$ 5.

TRIGGER ZONE: Price above the red line ($5 \times 2Y$ MA) = top zone.

PLAIN ENGLISH: Every previous cycle has topped within months of price crossing this line. Slow-moving but extremely reliable.

SOURCE: lookintobitcoin.com/charts/2-year-moving-average/

7 Crypto Fear & Greed Index

WHAT IT IS: Aggregated sentiment 0–100 based on volatility, momentum, social media.

TRIGGER ZONE: **90+ "Extreme Greed"** sustained for 2+ weeks.

PLAIN ENGLISH: Sentiment indicator only. Useful as confirmation. Tops happen when everyone is euphoric — this measures euphoria.

SOURCE: alternative.me/crypto/fear-and-greed-index/

8 Google Trends — "Bitcoin"

WHAT IT IS: Worldwide search interest for "Bitcoin," scaled 0–100.

TRIGGER ZONE: 80+ sustained = retail FOMO peak.

PLAIN ENGLISH: When your aunt is googling "how to buy Bitcoin," the top is near. This was 100/100 at every previous cycle peak.

The Confluence Score

Count indicators in the trigger zone. Match your score:

Score	What It Means	Action
0–2	Mid-cycle	Accumulate / DCA
3–4	Late cycle warning	Tighten stops, plan exits
5+	TOP ZONE	Execute exit plan
7–8	Cycle top imminent	Full risk-off
